

Greivin Díaz Mendoza

Software Developer Intern | Business Informatics Student

greivind01@gmail.com · +506 8361-4005 · [linkedin.com/in/gdiazm14](https://www.linkedin.com/in/gdiazm14) · <https://github.com/Gdiazm14> · Alajuela, Costa Rica

PROFESSIONAL PROFILE

Fourth-year Business Informatics student at UCR with a strong technical foundation in full-stack development and cloud architectures. Proven track record of building production-ready applications using Java Spring Boot and C# ASP.NET Core, with a focus on scalable RESTful API design. Contributed as Full-Stack Developer to a real-world institutional asset management platform at Universidad de Costa Rica, delivering features end-to-end across both frontend and backend layers. Hands-on experience implementing containerized solutions with Docker and deploying to cloud environments including AWS and Vercel. Adept at Agile/Scrum methodologies; committed to delivering high-quality software that solves real-world business needs.

EDUCATION

Bachelor's in Business Informatics

2023 – 2026 (in progress)

Universidad de Costa Rica – Sede del Pacífico · 4th year · Expected graduation: 2026

TECHNICAL SKILLS

Languages: Java · C# · SQL · HTML · JavaScript

Frameworks & Libraries: Spring Boot · ASP.NET Core · Blazor · React

Databases: SQL Server · Oracle · MySQL · Relational databases

APIs & Architecture: RESTful API design · JWT authentication · Role-based access control

Containers & Cloud: Docker · Docker Compose · Kubernetes · Amazon EC2 · Amazon ECS · Vercel · Render

Networking: Router/switch configuration · Port security · Routing · VLANs

Methodologies & Tools: Agile · Scrum · Git · ClickUp · Trello

FEATURED PROJECTS

Asset Management System (SGA) | *React · ASP.NET Core · SQL Server · Docker · Nginx*

- Institutional platform built for Universidad de Costa Rica's Centro de Informática to handle the full lifecycle of physical assets: registration, loan tracking, reconciliation, and reporting.
- Collaborated as Full-Stack Developer; led major refactoring across frontend and backend layers and implemented core features from the ground up.
- JWT-based authentication with role-based access control (Administrador / Asistente); loan module with automatic MOROSO status detection after 30 days.
- PDF loan receipt generation using jsPDF v3 primitives (no third-party table plugins); file-upload reconciliation flow using FormData with multipart handling.
- Soft-delete logic via Estado field; full audit trail through a BitacoraService. Containerized with Docker Compose and served via Nginx reverse proxy for on-premise deployment.

Finance App | *Java · Spring Boot · React · REST API*

- Personal finance web app with budgeting and expense tracking across customizable categories.
- Decoupled architecture: Spring Boot REST API backend with React interactive frontend.
- Implemented user authentication (JWT) and relational database persistence.
- Fully deployed on cloud platforms (Vercel + Render).

Library Management System | *C# · ASP.NET Core · Blazor · SQL Server · Docker*

- Full-featured system with loan management, reservations, book catalog, and role-based access (reader / admin).
- Monthly statistical reports downloadable in Excel and PDF; bulk book import via file upload.
- Email notification system with automated background jobs for loan reminders and reservation expiration (BackgroundService / IHostedService).
- Containerized deployment using Docker and Docker Compose; secrets managed via .NET configuration layering.

ADDITIONAL INFORMATION

Languages
Continuous Learning
Availability
Interests

Spanish (native) · English (intermediate — strong technical reading/writing)
Udemy: Java with Spring Boot · Microservices with Docker & Kubernetes
Internship starting August 2026 · Mon–Thu schedule per UCR academic calendar
Backend development · Cloud architectures · DevOps · Application Security
